Travel Website - TRAVELO

- **Aim** - A cross-platform hybrid website in which users can find different places/cities according to the provinces. The user itself can also add his/her own experience with CRUD functionality and can search for cities across different places. This web site also allows users to create a To-Do list for their trip.
- **Technologies** - C# in the backend with ASP.Net, Bootstrap for front-end technologies. MSSQL for creating Database to store user data.

Leaderboard Web Application - OLYMPIC LEADERBOARD

- **Aim** - This JavaFX application will show the leaderboard/Olympic medals won by different countries in the Olympic event. It has a secondary view for comparison of the medals won by a country with other participating countries. All this data will be dynamically taken from the database using APIs.
- **Technologies** - Core Java in the backend with JavaFX, ScreenBuilder in front-end to create user-friendly UI. Used HTML5 and CSS3 along with Bootstrap to add style to the Web Application.

Web Application - PIZZA MANIA

- **Aim** - A fully-functional Pizza ordering web application which helps the user to order their customized pizza, they can add their items to the cart and order them. With the help of CRUD functionality the user can edit and delete their order and also view them after the editing.
- **Technologies** - PHP for the client and server side scripting. Used PHP tags embedded in HTML for Web Development. HTML and CSS in the web page styling with Bootstrap functionality.
